

XM Radio is not only health competition to local radio broadcasting, but is one of the many up and coming users of space. This venture into the realm of satellite delivered content is progressive and should be welcomed! Think of the potential that space offers through exploration, satellite communications, and development of housing or mining. To hinder XM Radio, one of the pioneers of widely used space products, should be a crime. Its not fair (based on the terms of capitalism) to legislate out the capabilities of competition. It would be like McDonald's pressing legislation to keep Burger King from serving french fries.
